**DETAILED ACTION**

***REASONS FOR ALLOWANCE***

1. Claims 25, 33-48 and 83-85 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 25, Wells teaches a mobile communication terminal that receives communications services from a mobile wireless network (see fig.2, RF connection between a mobile communication terminal 10 and a mobile wireless network 32), comprising: a communication control that selectively implements multiple communication functionalities comprising a voice communication functionality (column 3, lines 8-14, see "speech"), an electronic message communication functionality (column 10, lines 9-25, see "Short Message Service (SMS) message") and a network functionality (column 10, lines 9-25, see "can be loaded from the network 32"), wherein while implementing the multiple communication functionalities (column 3, lines 8-14, see "speech", and see column 10, lines 9-25, see "Short Message Service (SMS) message"), at least one standby state is realizable in which no user action is prompted (Abstract and column 2, lines 13-25, see "Idle state"), receiving one or more blocks of screen data by a user of the mobile communication terminal (column 10, lines 9-25, see "can be loaded from the network 32"), stores the selected one block of screen data in memory area (column 10, lines 9-25, see "stored", "memory" and "can be loaded from the network 32"), and a display control that, when the terminal is in the selected one of the at least one standby state, displays the selected one of the one or more blocks of screen data (Abstract and column 2, lines 13-25, see "Idle state" and "selectively display" and "displayed during an Idle state" and see column 5, lines 39-45, see "if a user selects an animation" or see column 8, lines 14-15, see "selected animation").

Nishino teaches disclose a network browsing functionality for browsing a second network located outside the mobile wireless network and the viewer that activates the network browsing functionality access information provider servers located in the second network (see Abstract and column 13, line 65 to column 14, line 5, see “browsing”, “Web page” and “Internet”. Nishino’s “*Internet*” reads on applicant’s “a second network located outside the mobile wireless network”).

The combination of Wells and Nishino fails to teach a viewer that activates the network functionality to selectively access information provider servers located in the second network and receive one or more blocks of screen data from the accessed information provider server for preview of the received one or more blocks of screen data by a user of the mobile communication terminal, a registration control upon a selection by the user of one block of screen data through the preview of the received one or more blocks of screen data, stores the selected one block of screen data in one of multiple memory areas each correlatable to any one of the at least one standby state, a correlation control responsive to an instruction from the user to dynamically correlates the one of the multiple memory areas to a selected one of the at least one standby state selected by the user.

Dependent claims 33-48 and 83-85 are allowable for the same reason.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
